down.

It became clear that a more **resilient** architecture with different components in different processes would be more core CPUs and creates far safer applications. We can't put the whole system anymore, as components are distributed into an invalid state, we can easily restore it.

We can also limit the blast radius of potential failures by limiting the amount of permissions to each process. This permission pattern is known as the [Principle of Least Privilege](#). If you have a gardener coming over to work in your garden, you would not give them the keys to your house.

# 未来前瞻

- 查拉查词未来可能无法再 chrome 浏览器使用

Chrome V3 闹的 drama 让我觉得浏览器扩展不太靠谱，所以在开发着客户端版本，尽量让浏览器扩展端轻量化，避免被浏览器牵着鼻子走。

- 手机浏览器翻译插件

手机 firefox 浏览器也支持安装插件

edge canary 安卓版已经支持扩展了，内置了“沉浸式翻译”这个扩展。
